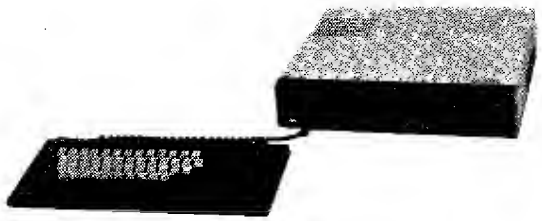
SERVICE MANUAL



■ **CONTENTS**

008530

SINCE 1887 YAMAHA
NIPPON GAKKI CO., LTD. HAMAMATSU, JAPAN
0.2K-0384 ⊖ Printed in Japan '86.12

FEATURES

- Separate keyboard with 10 keys
- Equipped with 2 1-Mbyte type 3.5 inch double-sided floppy disc drivers.
- 2 cartridge slot, 1 side slot.
- Capable of outputting each picture of RGB, composite video and RF
- Main recording capacity: 256 Kbytes
- Recording capacity for video: 128 Kbytes
- YM-3814 (MSX_2 system) used
  - Bit map function
  - Clock function
  - Back-up RAM (16 bytes)

SPECIFICATIONS

CPU to be used:	Z80A or its equivalent (LH0080A)
Clock frequency:	3.579545 MHz
Wait:	1 wait cycle inserted into M1 cycle
Interrupt:	NMI not used Interrupt from VDP and external slot is used. Normally, MSX-BASIC inter-printer uses 50Hz signal sent out from VDP as an interrupt signal. (Interrupt mode 1)
Reset:	Power ON reset or reset switch is used.

Memory

Main memory:	RAM area (with memory mapper function) 256 Kbytes 64 Kbit × 4 columns × 8 chips ROM area (including each type of application) MSX_2 BASIC Ver 2.1 (INT) 32 Kbytes Exp. BASIC & Disk BASIC 32 Kbytes ARABIC BASIC 32 Kbytes SAKHR FILES 48 Kbytes ARABIC PAINTER 64 Kbytes ARABIC WP 32 Kbytes
Video RAM:	128 Kbytes

Screen Display

VDP to be used:	Video display processor V9938
Characters:	Alphanumeric characters, Arabic characters, graphic characters ..... 256 types 8 × 8 (6 × 8 screen 0) dot Refer to Display mode for resolution, pattern size, color and number of sprites.

Calendar Function and Battery Backup Function

Calendar:	Built in YM3814 (MSX_2 system) Compatible with RP5C01 (made by RICOH) on software Error; within 60 seconds/month Calendar (year, month, day) Time (hour, minute, second)
Back-up:	Calendar clock & RAM (16 bytes) built in YM3814 is backed up when main power is turned OFF.
Battery:	2 AAA type batteries are used (about 1-year service life)

I/O Interface

Separate keyboard:
- 13 pin DIN receptacle connector
- Step sculpture type (Only 10 key is step type.)
  - Alphanumerical characters, special characters and arabic characters 48
  - Control and special keys 16
  - Cursor keys 4
  - Function key (10 functions available by shifting) 5
  - 10 key 16
  - CODE lock and CAPS lock ..... indicated by LED

Audio cassette interface:
- 8 pin DIN receptacle connector
- Baud rate: 1200/2400bps FSK system (changed by software)
- With remote control function

Printer interface:
- Unphenol 14 pin female connector
- Conforming to 8 bit parallel centronics specifications
- TTL level

Generalized input/output (JOYSTICK etc.) 2 port:
- D sub-type 9 pin male connector × 2
- TTL level

A/V output
- Sound output 8 octave triple chord output, special sound, noise RCA pin jack
- 8 octave triple chord section
  - 47kΩ load, 0.40±0.10Vrms MAX
  - (440Hz square wave, 1ch output)
- Special sound section
  - 47kΩ load, 0.20±0.05Vrms MAX
  - (440Hz square ware output)
- PAL composite video output
  - 75Ω RCA pin jack
- RF output
  - UHF 36 channels
  - RCA pin jack
- RGB output
  - Signal corresponding to EIAJ21 pin output
  - 8 pin DIN receptacle connector
- ROM cartridge slot (SLOT A, SLOT B):
  - 50P Female connector of MSX specifications
- Side cartridge slot (SLOT #33):
  - 60P Card edge connector (specially for YAMAHA)

Power section

Power specifications:	Primary side	100V ~ 240V (±10%) 50/60Hz
	Secondary side	5V 3.0A
		+12V 0.5A
		−12V 0.2A
Power external output	5V ± 5%	1A (max)
	slot	300mA × 2
	I/O port	50mA × 2
	Side slot	300mA
	+12V ± 10%	100mA (max)
	−12V ± 10%	100mA (max)

General specifications

Power:

Power consumption: Max.	21W
Operating conditions: Temperature	5 ~ 35°C
Humidity	20 ~ 80%
Dimensions (Width × height × depth):	
AX-500	395mm × 80mm × 380mm
Keyboard	417mm × 36mm × 175 mm
Curled cord	1500mm ± 50mm
Weight: Main Unit	6.7kg
Keyboard	1.8kg
AC cable:	2000mm ± 50mm

3.5 inch FDD

Number of built-in drivers:

AX-500 Model	2 units

Specifications of drivers to be used:

Product number	JU-363-08 type
Disc to be used	3.5 inch double-sided, double-density, double-tracks (2DD type)
Recording capacity	1 Mbyte unformatted (both sides) 720 Kbytes formatted (both sides)
Recording density	8717 BPI
Track density	135 TPI
Number of cylinders	80 cylinder
Number of tracks	160 tracks when both sides are used.
Access time	100ms at average Step rate; 6ms

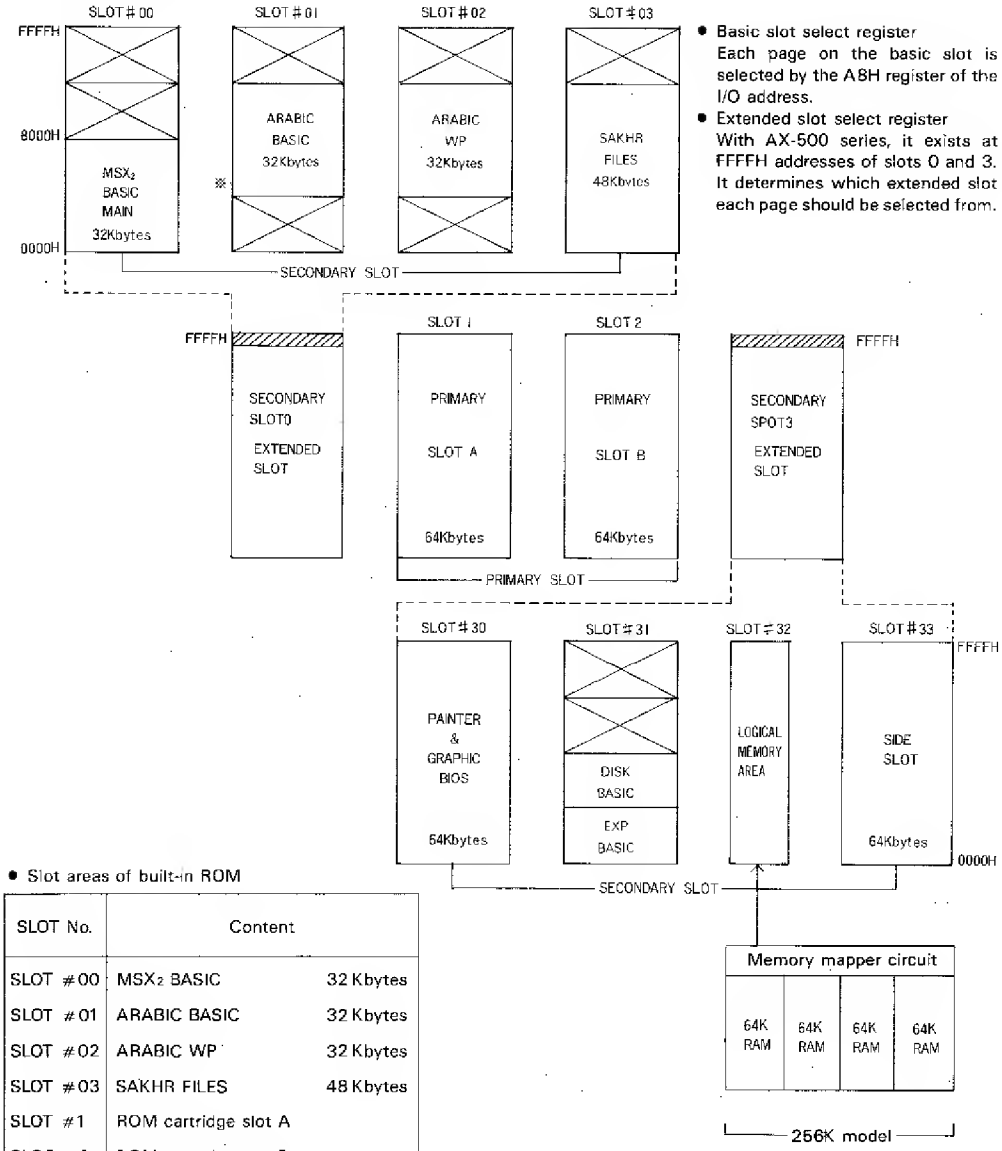
Specifications of controller:

FDC	MB8877M (Fujitsu)
Data separator	SED9420-CAC (SEIKO) Analog filter changing type VFO

Display Mode

	Resolution	Pattern Size	Color	Sprite Number	V-RAM Area
Text I (SCREEN 0)	256 × 192 (MAX 40 characters)	6 × 8 (256 types)	2 out of 512	No	16K
Text II (SCREEN 0)	512 × 192 (MAX 80 characters)	6 × 8 (256 types)	2 out of 512	No	16K
Multicolor (SCREEN 3)	64 × 48	4 × 4	16 out of 512	4/line out of 32	16K
G I (SCREEN 1)	256 × 192	8 × 8 (256 types)	16 out of 512	4/line out of 32	16K
G II (SCREEN 2)	256 × 192	8 × 8 (768 types)	16 out of 512	4/line out of 32	16K
G III (SCREEN 4)	256 × 192	8 × 8 (768 types)	16 out of 512	8/line out of 32	16K
G IV (SCREEN 5)	256 × 192	Bit Map	16 out of 512	8/line out of 32	32K
G V (SCREEN 6)	512 × 192	Bit Map	4 out of 512	8/line out of 32	32K
G VI (SCREEN 7)	512 × 192	Bit Map	16 out of 512	8/line out of 32	128K (2 screens)
G VII (SCREEN 8)	256 × 192	Bit Map	256 colors simultaneously	8 line out of 32	128K (2 screens)

■ MEMORY MAP



- Basic slot select register
  Each page on the basic slot is selected by the A8H register of the I/O address.
- Extended slot select register
  With AX-500 series, it exists at FFFFH addresses of slots 0 and 3. It determines which extended slot each page should be selected from.

- Slot areas of built-in ROM

SLOT No.	Content	
SLOT #00	MSX2 BASIC	32 Kbytes
SLOT #01	ARABIC BASIC	32 Kbytes
SLOT #02	ARABIC WP	32 Kbytes
SLOT #03	SAKHR FILES	48 Kbytes
SLOT #1	ROM cartridge slot A	
SLOT #2	ROM cartridge slot B	
SLOT #30	ARABIC PAINTER	64 Kbytes
SLOT #31	DISK/EXP BASIC	32 Kbytes
SLOT #32	MAIN RAM	256 Kbytes
SLOT #33	Side cartridge slot	

■ AX-500 I/O ADDRESS MAP

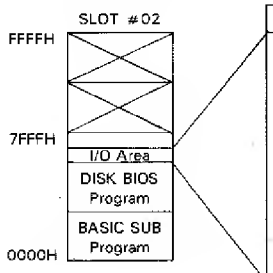
The following table shows the AX-500 I/O map.

FFH FEH FDH FCH	P/W R/W R/W R/W	Map register on p.3 Map register on p.2 Map register on p.1 Map register on p.0	Each block of M0 to M3 is assigned when the power is ON and when resetting.
B5H B4H	R/W W	Calendar clock (Built in MSX_2 system)	Data (READ/WRITE) Address latch (WRITE)
ABH AAH A9H A8H	R/W R/W R R/W	Parallel port (equivalent to μPD8255)	Mode set (bit set, reset) Keyboard strobe, cassette control PP1 sound Keyboard return read Primary slot select register
A2H A1H A0H	R W W	Sound generator, joy port, etc.	Data (READ) Data (WRITE) Internal address latch (WRITE) SSG internal register address set
9BH 9AH 99H 98H	W W R/W R/W	VDP-9938	Internal register indirest assignment (WRITE) Color palette register access (WRITE) Command access to VDP/status read Data to V-RAM READ/WRITE
91H 90H	W R/W	Printer port	Data output (printer) Busy (READ) bit 1 Strobe (WRITE) bit 0
47H 46H	R/W W		Bit pattern (WRITE)/color code (READ) FG, BG color code (WRITE)
42H 41H	R/W W		Back-up RAM (data) READ/WRITE Back-up RAM address latch
40H	R/W		Device ID number register

■ FLOPPY DISK SYSTEM I/O ADDRESS MAP

The I/O address for the floppy disk system is assigned to a part of the memory area of application software by using the memory mapped I/O system.

Floppy disk system I/O address map



Address	When READ	When WRITE
7FBCH	b7: IRQ b6: DRQ b5 b4 (D7 6 5 4 3 2 1 D0; MSB; LSB) b3 b2 b1 b0	b7 b6 b5 b4 b3: Moter ON/OFF 0: OFF b2: Side Select 0: Side 0 b1: Drive 2 Select 0: mask b0: Drive 1 Select 0: mask
7FBBH	Data register	Data register
7FBAH	Sector register	Sector register
7FB9H	Track register	Track register
7FB8H	FDC status register	FDC command register

7FB8H to 7FBBH are internal registers of FDC (MB8877).

■ DISASSEMBLY PROCEDURES

Top Cover Removal

- Unscrew 4 screws on both sides.
- Unscrew the screw at the upper center of the rear panel.
- Remove the top cover by lifting it up while using care for the groove of the side slot guide.

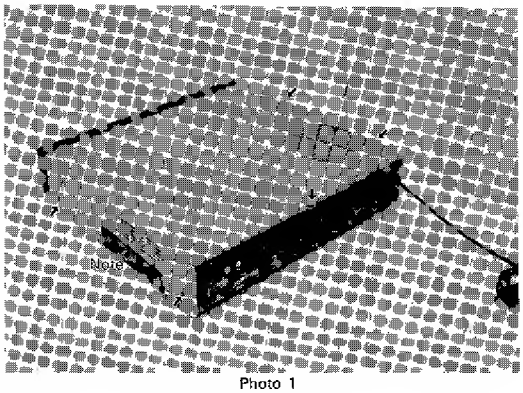


Photo 1

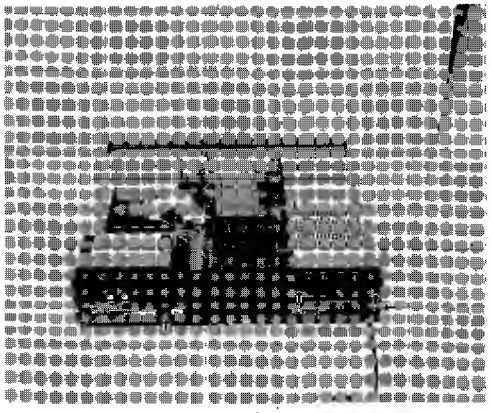

Photo 2

Rear Panel Removal

- Unscrew 5 screws fixing the rear panel.
- Remove the rear panel by opening it from the lower side while sliding it upward a little.

AC Inlet Ass'y Removal

- Unscrew 2 screws fixing the AC inlet ass'y. (Photo. 3-A)
- Disconnect 2 power lines from the AC inlet ass'y. Connector for front panel ass'y (Photo. 3-C) Connector for CPU main circuit board (CN304) (Photo. 3-D)
- Remove the AC inlet ass'y by lifting it up.

Note) The power unit (power circuit board) is installed in the AC inlet ass'y.

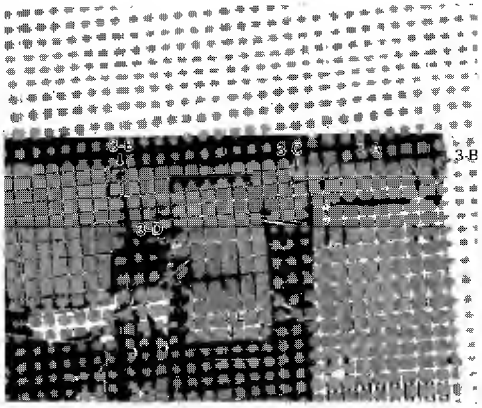

Photo 3

Front Panel Ass'y Removal

- Unscrew 2 screws in the apper part of the front panel ass'y (Photo. 3-B)
- Disconnect the flat cable (CN308) to the CPU main circuit board. (Photo. 3-E)
- Remove 4 plastic stoppers of the front panel ass'y from the bottom of the main unit by pushing them with a screwdriver. (Photo. 4)
  * With the Y1S805/128 model, if a floppy disk driver

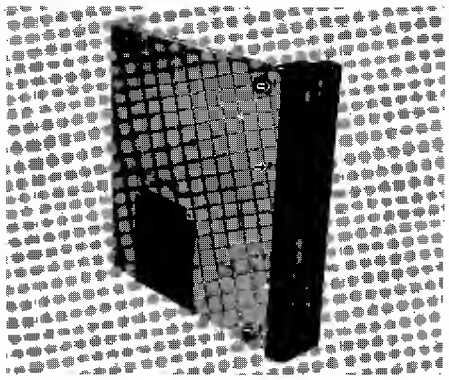

Photo 4

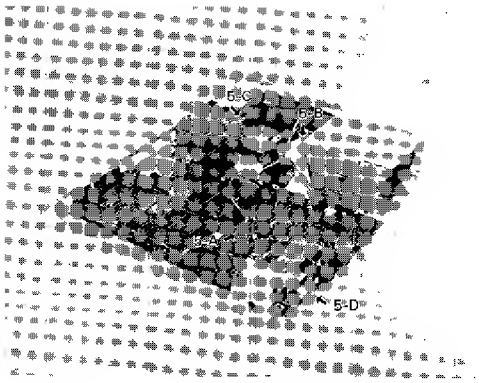

Photo 5

CPU Main Circuit Board Removal

- Pull off the battery cable ass'y (CN309). (Photo. 5-A)
- Pull off the power line to the floppy disk driver and 34P flat cable from the connector on the floppy disk driver. (Photo. 5-B)
  Disconnect the connector of the video circuit board. (Photo. 5-C)
- Unscrew 6 screws fixing the CPU main circuit board and 2 screws of the side slot ground. (Refer to the screw list.)
  Remove 2 PC supports (Black) in the center of the CPU main circuit board.
  Remove the keyboard connector from the bottom chassis by loosening 2 screws. (Photo. 5-D)

Video Encloder Circuit Board Removal

- Pull off the harness (CN201) from the CPU main circuit board. (Photo. 6-A)
- Unscrew 4 screws.
- Remove the video encoder circuit board by pulling it rearward.

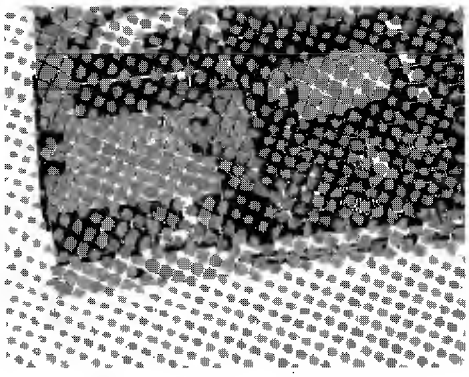

Photo 6

FDD Floppy Disk Driver Removal

- Unscrew 2 screws fixing the FDD shielding ass'y.
- Pull out the connector to the FDD (with 34 pin flat cable and power cable).
- Unscrew 4 screws fixing the video encoder circuit board. (Photo. 6)
- Remove the FDD shielding ass'y with 2 floppy disk drivers mounted as they are.

  Note: As the FDD shielding ass'y is held by catches of the main body chassis, slide it forward for its removal.

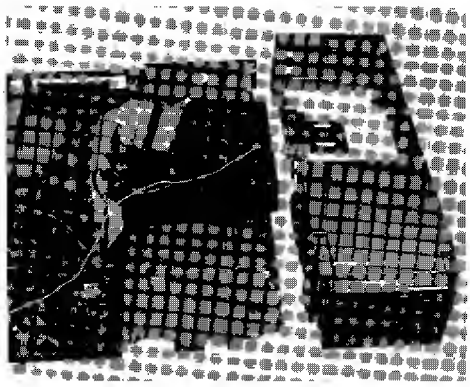

Photo 7

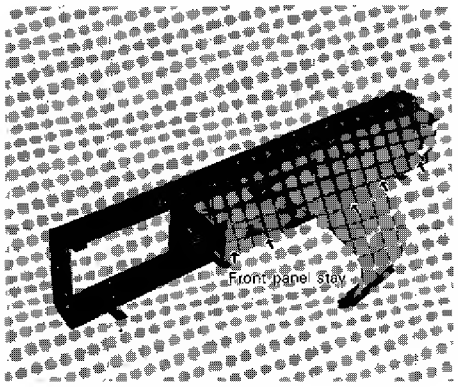

Photo 8

Front Panel Ass'y Disassembly

- Unscrew 4 screws (3 × 16) fixing the front panel stay.
- Remove the stay by sliding it rearward gradually while using care for the 60 pin flat cable.

- Pull off the connector of the micro switch ass'y from the slot circuit board. (Photo. 9-A)
- Unscrew 2 screws (3 × 8) fixing the cartridge case and remove the cartridge case ass'y from the front panel. (Photo. 9-B)

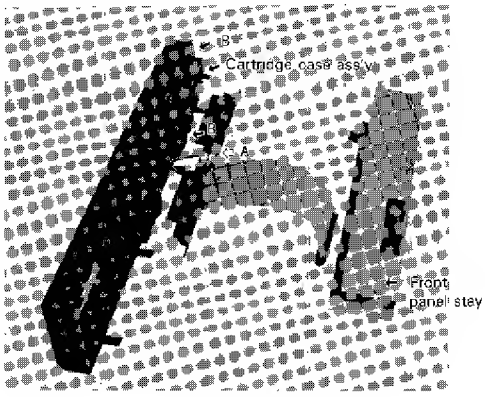

Photo 9

* Note that a fine ground wire is connected on the back of the 60 pin flat cable. Be careful not to move the cable with force in removal, for it may break the fine ground wire.

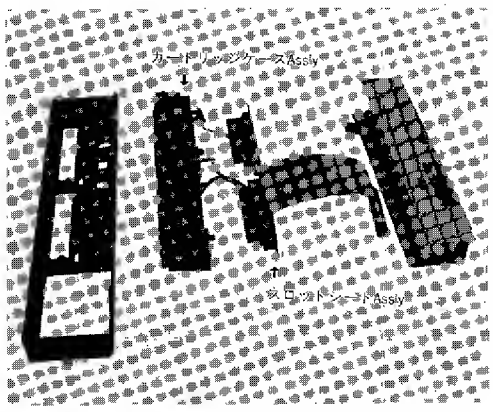

Photo 10

■ KEYBOARD UNIT DISASSEMBLY

Keyboard Circuit Board Removal

(1) Unsolder A and B in Fig. 1.
(2) Straighten the catches numbered from 1 to 6 in the figure.
(3) Remove the flexible circuit board from the connectors C and D as shown in Fig. 2.
(4) Remove the keyboard circuit board gradually.

Keyboard Contact Point Removal

(1) Unscrew 13 special screws shown in Fig. 1, and the contact point of the keyboard can be removed.

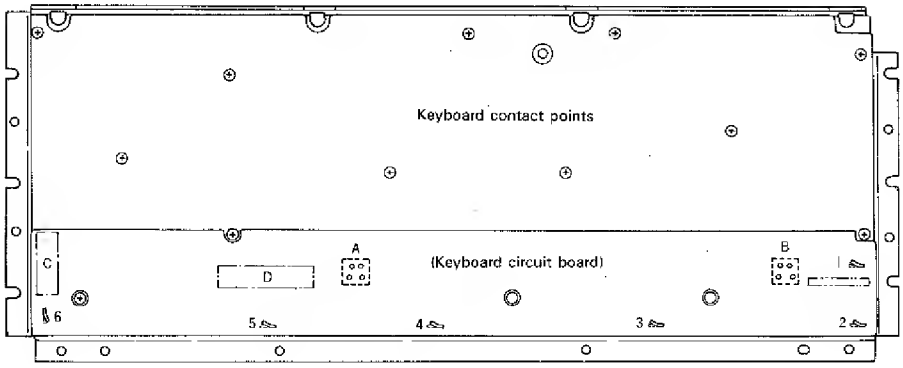

図 1

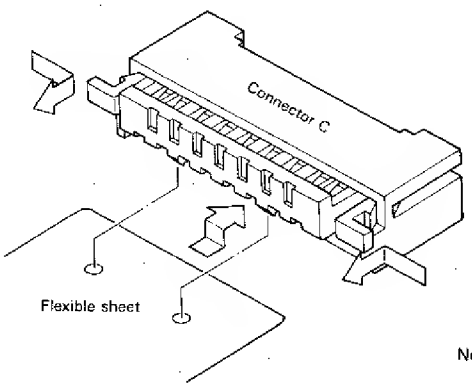
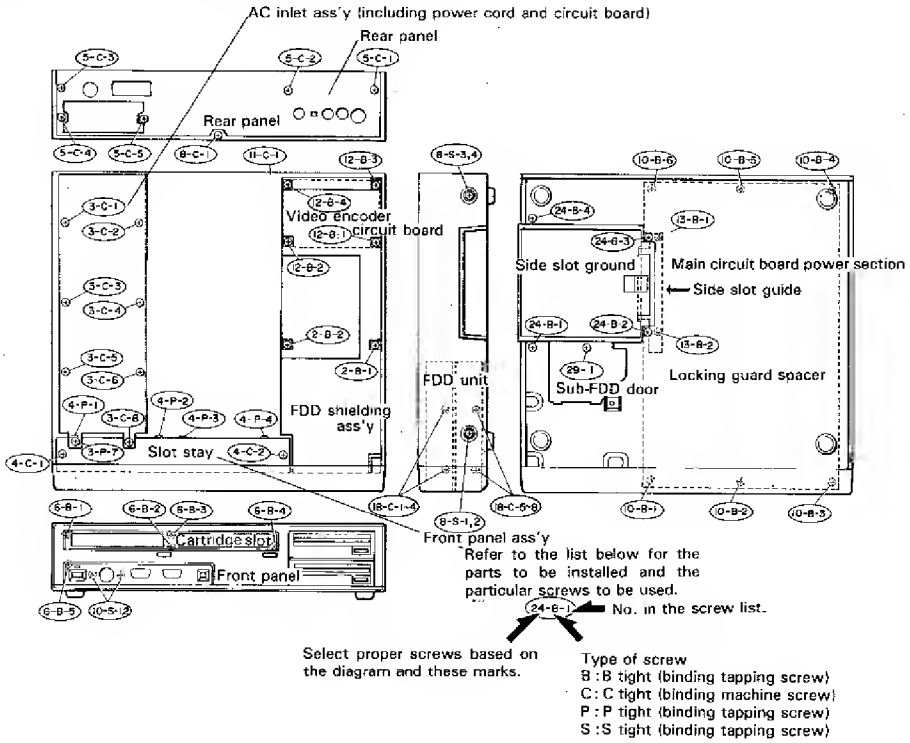
Fig. 1



Note: Insert the flexible sheet while fitting the catches of the connector into the holes in the flexible sheet.

Fig. 2

■ SCREW ARRANGEMENT DIAGRAM



Screw List

Part to be installed		Type of screw and quantity					
No.	Part name	+ binding B tight 3×8	+ binding C tight 3×6	+ binding P tight 3×14	Cup S tight	Coin slotted pan head	Total (pcs.)
24	Side slot guide (to bottom)	4					4
10	Main circuit board (to bottom)	6			2 (to K8 connector)		8
13	Side slot ground	2					2
2	FDD shielding ass'y (to bottom)	2					2
12	Video circuit board (to FDD shielding ass'y)	4					4
18	FDD unit (for 2 units)		8				8
6	Front panel (cartridge slot LED)	5					5
4	Slot stay and circuit board (to front panel)		2 (to bottom)	4			6
3	Power supply unit (to shielding)		8				8
5	Rear panel		5				5
8	Top cover		1 (to rear panel)		4		5
29	Sub-FDD door	1				(1)	1
	Total (pcs.)	24	24	4	6	(1)	58

■ ADJUSTMENTS

< Voltage Adjustment >

Item	For
Conditions	Connect power circuit to CPU board. No load applied to each slot (such as game cartridge) of CPU board. No paripheral equipments (such as printer and joy stick) should not be connected.
Voltage adjustment	+5.10V ± 5% Connector CN304 (2 pin) and GND
Voltage Confirmation	−12V Connector CN304 (4 pin) and GND: −12V ± 10.0% +12V Connector CN304 (1 pin) and GND: +12V ± 10.0%

- With each unit connected, adjust VR101 in the power supply unit so that the output voltage is obtained at the voltage input terminal of the CPU circuit board CN304 as described in the above table.

< Adjustment and Confirmation of Calendar Clock and Back-up Circuit >

Calendar clock adjustment

Write "0011B" into the test register of the calendar clock, set to TEST.3 mode and adjust TC301 on CPU circuit board so that the frequency of the output signal at ALARM terminal of YM3814 (S-1985) 87 pin satisfies the following specification. (Refer to p.12 for the calendar clock adjustment.)

Item	For
Calendar clock	YM3814 (S-1985) 87 pin 8.192 [KHz] ± 0.2 [Hz]

Confirmation of battery back-up operation

Using BASIC command or MSX-DOS command, put time/ year, month and day in memory.

Turn OFF the power once and ON again, then check to make sure that the time/year, month and day is maintained correctly.

Confirmation of battery back-up circuit terminal voltage

Check to make sure that the voltage at 86 pin BVSS terminal of YM3814 (S-1985) satisfies specifications given below.

Power	Value
When ON	0 − 0.7V

Power	Value
When OFF	− 2.2V or less

< Adjustment and confirmation of picture circuit >

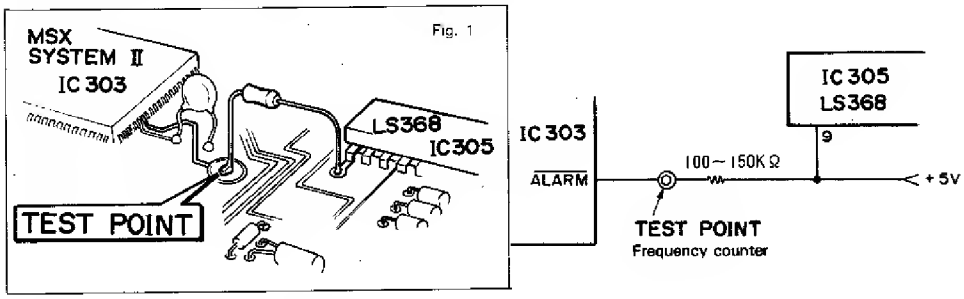
Check or adjust for the following at the connecting point A/V connector (CN312) on CPU circuit board.

Pin No.	Name	Item
1	AUDIO	Confirm sound output.
2	VIDEO	Connect video unit and confirm composite video signal.
3	GND	
4	SC	Adjust with TC302 for; CPU CLOCK TTL level f = 3.57945 [MHz] ± 500 [Hz].
5	NC	NON CONNECT
6	SYNC	Negative polerity, period signal output TTL level
7	GND	
8	B	Confirm that voltage is between 0.85V and 1.10V when screen display is white.
9	G	
10	R	

■ CALENDAR CLOCK ADJUSTMENT

1. Preparation for adjustment

Connect a 100K to 150K pull-up resistor between the TEST point and +5V (IC305, 9 pin: LS368) of the CPU circuit board as shown in Fig. 1.



With the CPU circuit board in operating state, prepare BASIC programs as follows.

```
10 OUT & HB4, & HE
20 OUT & HB5, & H3
30 END
```

2. Measurement and adjustment

With a frequency counter connected to the TEST point, run the program and adjust TC301 (variable trimmer) so that f=8.192KHz± 0.2Hz is satisfied.

● **SED9420COB (DATA SEPARATER)**

Pin No.	Pin Name	Function
1	OSC1	Inverting amplifier gate input in crystal oscillation circuit
2	OSC2	Inverting amplifier drain output in crystal oscillation circuit
3	CLK1	Clock input for FDC Standard floppy (8 inch): 8MHz Mini floppy (5 inch): 4MHz
4	TEST2	TEST terminal (input terminal with pull-up resistor)
7	RD DATA	Input terminal (with pull-up resistor) of read data signal from floppy disk driver unit (FDD)
8	WINDOW	Output terminal of data window signal for separating DATA signal into clock pulse and data pulse.
9	DATA	Output terminal for data signal produced from RD data signal. It is separated into data pulse and clock pulse by window signal which is read to FDC.
10	MFM/FM	Terminal for changing recording system between single density and double density (with pull-up resistor) · Double density (MFM recording): High level · Single density (FM recording): Low level
11	MIN/STD	Terminal for changing floppy disk type between mini type (5 inch) and standard type (8 inch) · 5 inch floppy disk: High level · 8 inch floppy disk: Low level
12	Vss1	Ground terminal (digital system)
13	Vss2	Ground terminal (analog system)
14	CONTROL	For control of VCO (Voltage Controlled Oscilator) Input terminal for voltage (output voltage of loop filter)
15	OFFSET	Input terminal of offset voltage for correcting oscillation center frequency of VCO. Offset voltage can be also generated automatically by externally attaching capacity.
17	LPF	Connecting terminal of loop filter (output terminal of charge pump)
18	TEST1	Test terminal (not connected usually)
19	WCLK	Write clock for FDC · STD (8 inch)/MFM : T = 1μsc STD/FM : T = 2μsc · MIN/MFM : T = 2μsc · MIN/FM : T = 4μsc
20	CR	C-R externally attached terminal for timer circuit
21	CLK2	MB8877 system, clock output terminal for FDC · 8 inch floppy : 2MHz · 5 inch floppy : 1MHz
22	TRIG IN	Trigger input terminal for timer circuit (with pull-up resistor)
23	TM OUT	Timer circuit output terminal
24	V_{DD}	+5V power voltage terminal

Note) The input terminal with pull-up.resistor is pulled up by a resistor whose standard value is 100kΩ. As noise tends to affect easily when used open, it is recommended to connect directly to V_{DD} if the input terminal is used High level.

■ NEW LSI DATA TABLE

• MB-8877 (FDC)

Pin No.	Pin Name	I/O	Function
1			
2	$\overline{WE}$	I	Write request signal to internal register
3	$\overline{CS}$	I	FDC chip select signal
4	$\overline{RE}$	I	Read request signal to internal register
5	A0	I	Address line to select internal register
6	A1	I	Address line to select internal register
7	DAL0	I/O	Data line
